Sprint 1: Meeting Minutes

Members : Adam, Dom, Michele, Raghav

Course Number: IFB207

Group Number: 3

Goal:

In this sprint meeting the goal will be to start allocation for project tasks to begin development of independent functions and redesigns.

Summary:

To begin the sprint, we thought about the strengths and weaknesses of the group members and then went through each task in the backlog thinking about how it could be implemented through the application. Once this was done, we once again went through the backlog and allocated tasks towards the strengths of each team member.

Task allocation:

Adam: structure and templates, backend database design, views,

Dom: error handling, filtering and logged in user

Michele: Register and login forms, general design iterations

Raghav: dynamic content, storage of images and data

Afterword:

For those who didn't attend the meeting please don't feel pressured to do some of these tasks yourselves if you need help with some of it feel free to reach out as these are just general guides, some if the tasks might be bigger then expected.
